The JLab 12 GeV Program: Results and Future Perspectives

Tuesday, 27 June 2023 09:30 (30 minutes)

The CEBAF accelerator complex at Jefferson Laboratory has been delivering precise electron beams with energies up to 12 GeV for several years now. I will review the results to date, with an emphasis on meson spectroscopy and dynamics, and provide an outlook for measurements from approved experiments that will run in the next several years.
