# Prospects for XYZ studies at future facilities

*Friday, 23 June 2023 12:00 (30 minutes)*

The next generation of electron-hadron facilities has the potential for significantly improving our understanding of exotic hadrons. The  $XYZ$  states have not been seen in photon-induced reactions so far. Their observation in such processes would provide an independent confirmation of their existence and offer new insights into their internal structure. I will discuss what are the opportunities for spectroscopy at the newly planned facilities.

## Collaboration

**Primary author:** PILLONI, Alessandro (University of Messina and INFN Catania)

**Presenter:** PILLONI, Alessandro (University of Messina and INFN Catania)

**Session Classification:** Plenary session
