# The phi meson in nuclear matter from theory and experimental data

*Friday, 23 June 2023 15:20 (20 minutes)*

The status of recent theoretical and experimental research related to the properties of the  $\phi$  meson in nuclear matter is reviewed, focusing on observables that will be measured at the J-PARC E16 experiment, including dilepton and  $K^+K^-$  decay modes and their angular distributions. The relation of these observables to fundamental properties of the strong interaction and nuclear matter, such as chiral symmetry, its partial restoration in nuclear matter, in-medium Lorentz symmetry violation and the resultant modification of hadronic dispersion relations, are also discussed.
