## Exotic states from LHCb

*Friday, 23 June 2023 09:00 (30 minutes)*

The Large Hadron Collider beauty (LHCb) collaboration has made significant strides in the study of exotic states of matter. These states, which include particles composed of more than three quarks or with non-quark constituents, challenge our understanding of the strong force and the nature of hadrons. In this talk, we present the latest experimental results from LHCb on exotic states, including studies of charmonium sector and heavy-flavor baryons. We will also discuss the implications of these findings for our understanding of QCD and prospects of upcoming data taking periods.

### Collaboration

LHCb
